

Hitch Lock

The Hitch lock is designed to limit side to side movement.

If your receiver has a plastic surround saying "Nissan" "Toyota" or Chrome Plastic etc
You need to rip this off first, the hitch lock will not work with this on.

The packer plates may or may not fit into your receiver, if you can only get one in I'd run with the top one,
as you push it in lift the bike carrier from the rear to make room.
